

Marsden Branch Drainage Improvements

Year Funded: 1998

Budget: \$269,000

Description: This project will improve a drainage outfall in the Devon Park subdivision which runs parallel to Rosemont Drive in the backyards of 16 single family residences. Lack of access for maintenance and severely eroding stream banks have created flooding and property losses issues. This project will install a new culvert under Winston Blvd and at locations where buildings are too close to the deeply eroded stream channel. The existing stream channel will also be modified to accommodate flows from current and future land use.
