

Market Street Drainage Relief

Year Funded: 2000

Cost: \$636,000 (\$20,000 funded by NC Ecosystem Enhancement Program for storm water wetland in Wallace Park)

Description: The Market Street Drainage relief project installed a new drainage system on Perry Avenue to mitigate flooding problems on Market Street near 18th and 19th streets. As part of this project, a storm water wetland was also installed at Wallace Park to filter storm water runoff from 25 acres of fully developed residential area. Before the wetland was installed, runoff from the 25-acre area received no treatment prior to discharge into Burnt Mill Creek.
