ADDENDUM NUMBER 1
Front Street Bridge Rehabilitation
BR-AEC-0424
April 4, 2024

To all holders of Bid Documents, please be advised of the following:

BID DATE HAS BEEN EXTENED TO APRIL 15, 2025 @ 2:00 PM

GENERAL CLARIFICATIONS:

Response to questions received.

1. *Are existing bridge plans available?*

Answer: Yes, they are included in this addendum.

2. *Do you have to top flange width of the girders?*

Answer: The existing plans show the existing beam data. Beam sizes vary, and include shapes 24WF76, 27WF102, 30WF116, 36WF170, 36WF160, 36WF150, 36WF135.

3. *As the jacking loads are quite high and large jacks will be needed, can you confirm the factoring. The load table notes that the load is factored, yet in the notes the minimum safe capacity required is 150% of the load specified. It seems that the factoring is applied twice.*

Answer: Prospective bidders should note the units (pounds) associated with the table in the plans. The loads in the table are a 1.25 factor of dead load only for the loads assumed present during jacking. The jacks shall be required to provide 150% of calculated service loads. The contractor shall calculate the anticipated loads and submit them with working drawings as stipulated in the special provision and the jack type and capacity. The jacks shall provide a minimum of 150% of the load specified in the table (per note on the plans) but this does not relieve the contractor of the responsibility to design the jacking scheme. The table in the plans establishes a minimum but the SP requires the contractor to use 150% of the calculated service load (per the contractor's calcs/working drawings).

General Items

1. The contractor will be required to develop and maintain a 2 week look ahead schedule of the required work throughout the duration of the project. This schedule should include anticipated start and completion dates of construction milestones, starting and ending dates of subcontractor work, and anticipated night work. This schedule will be submitted to the Project Manager with the City at the beginning of each work week for the duration of the project.

PLAN MODIFICATIONS:

No plan modifications proposed for Addendum #1.

Acknowledge receipt of this Addendum in the space provided in the Proposal. Failure to do so may disqualify the Bidder.

All other terms and conditions remain unchanged.

Daryle L. Parker, Purchasing Manager
Purchasing Division

BILL OF MATERIAL

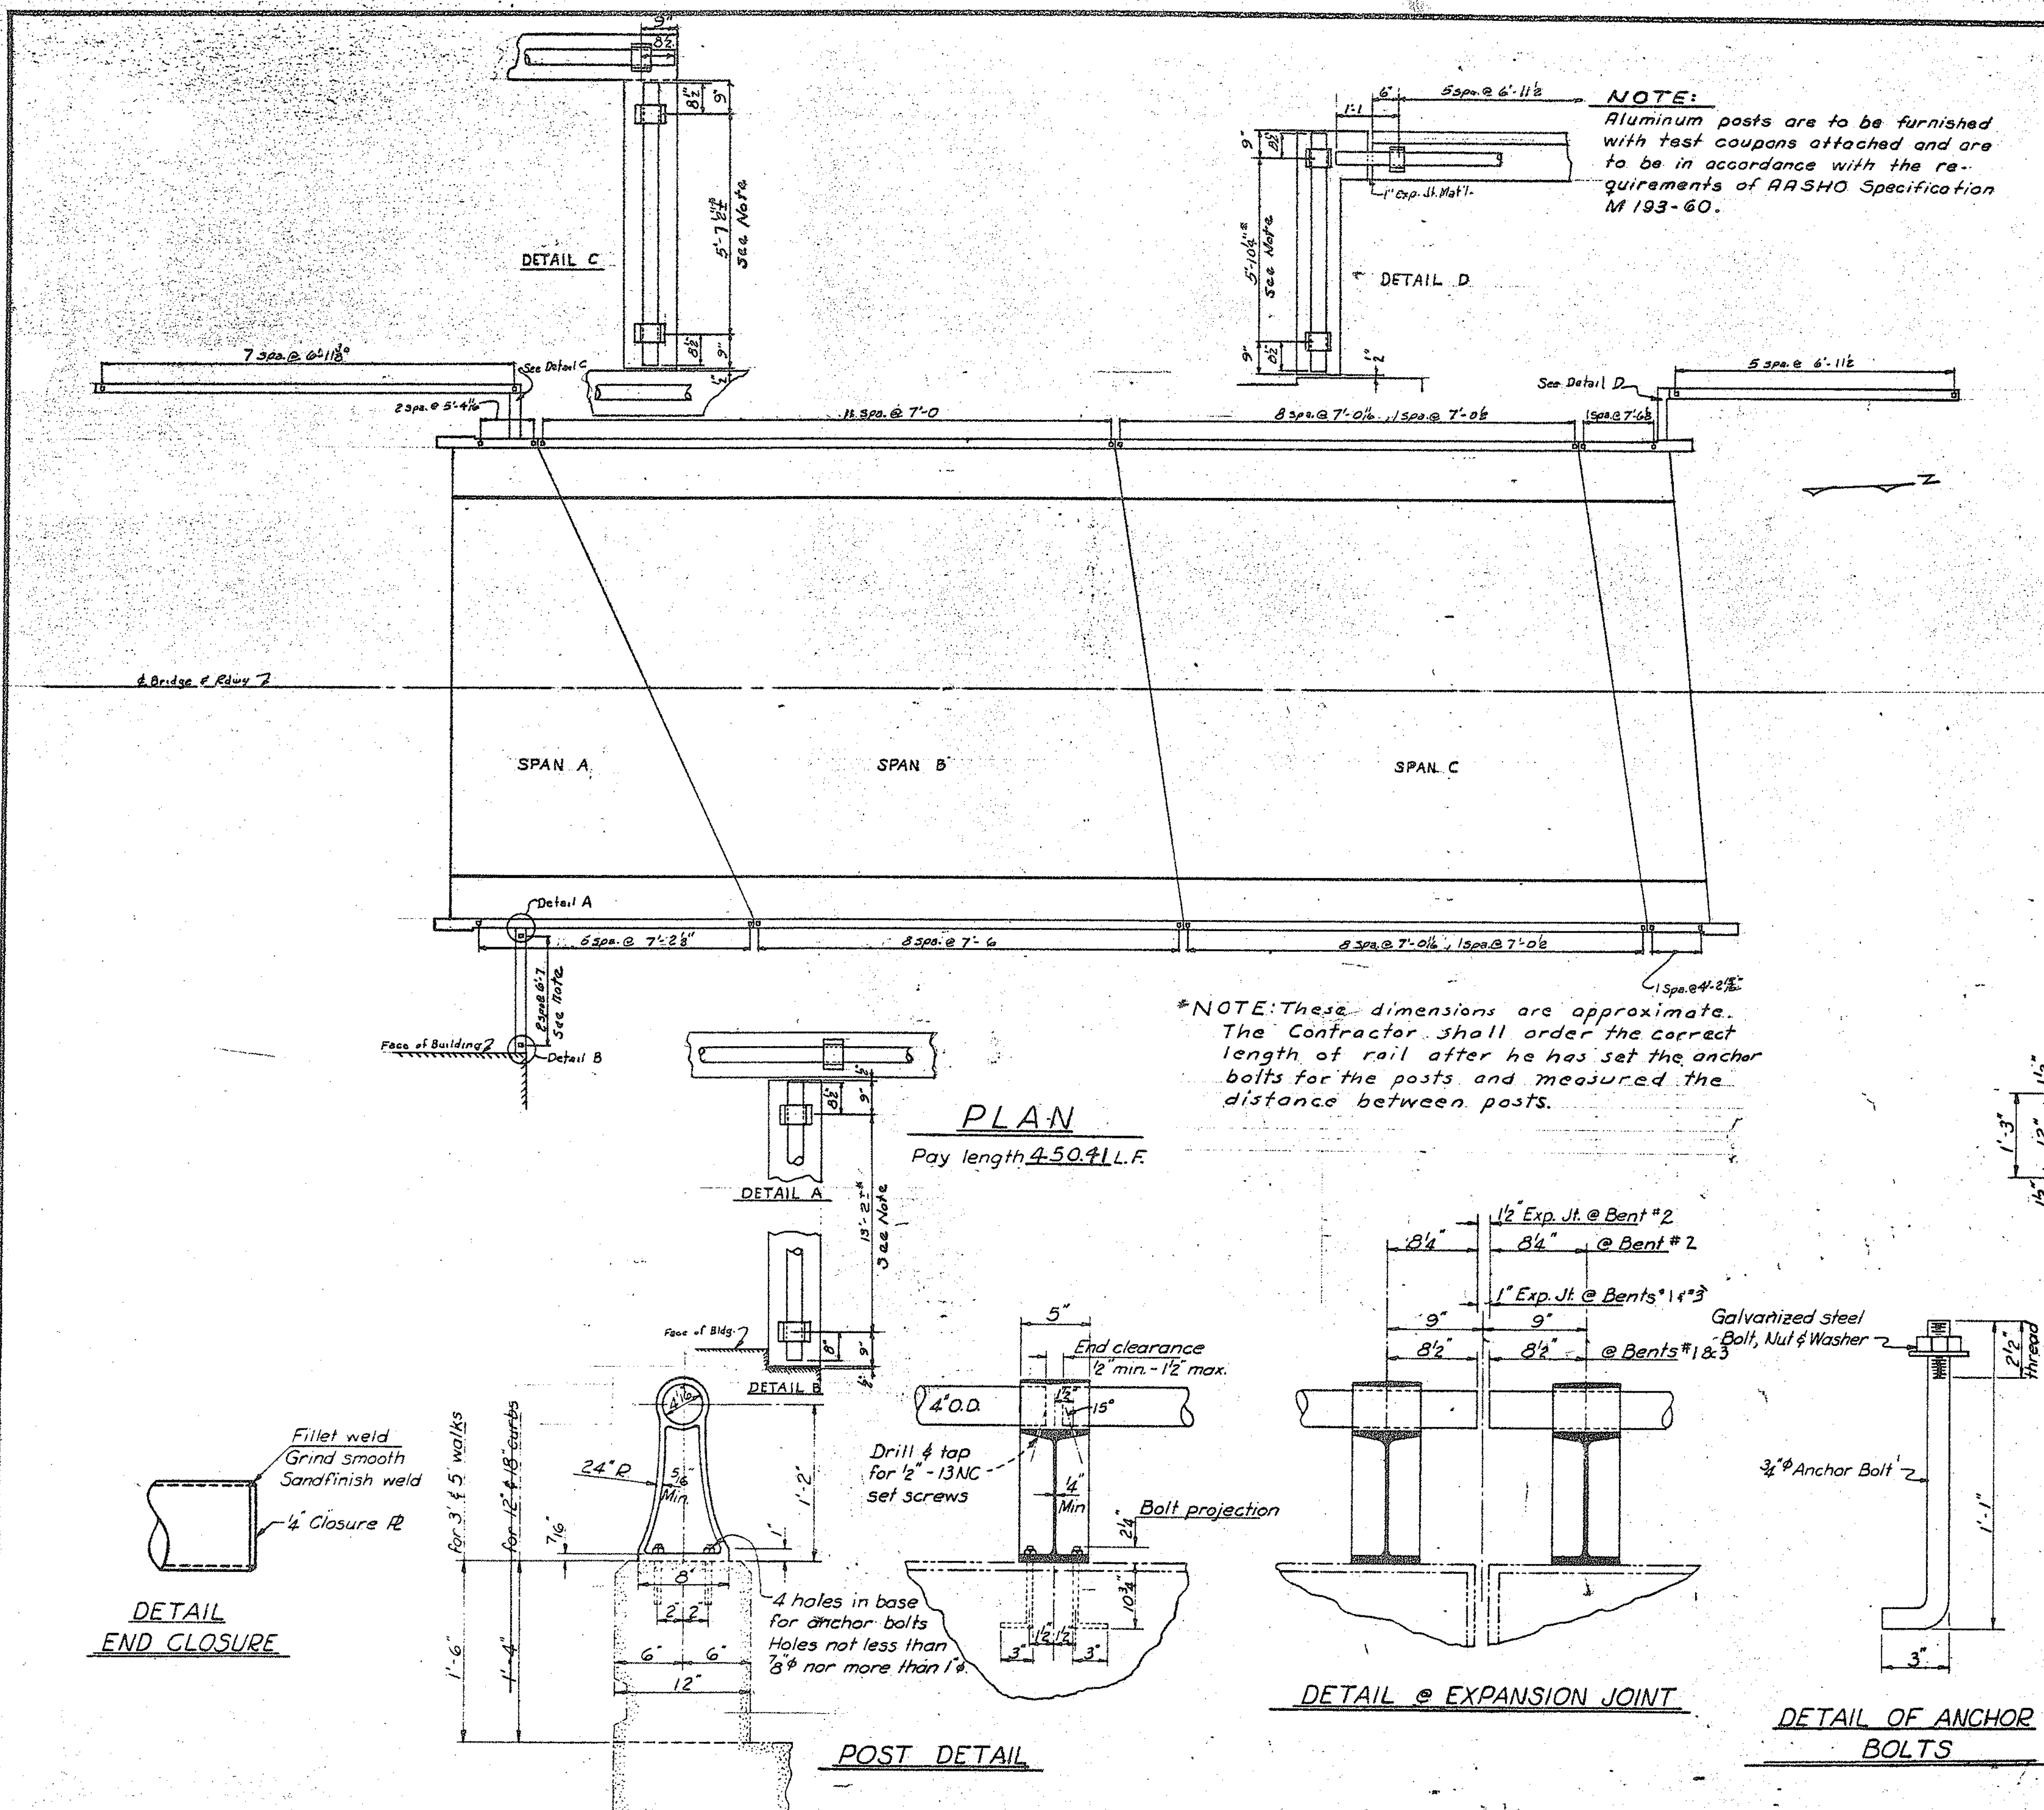
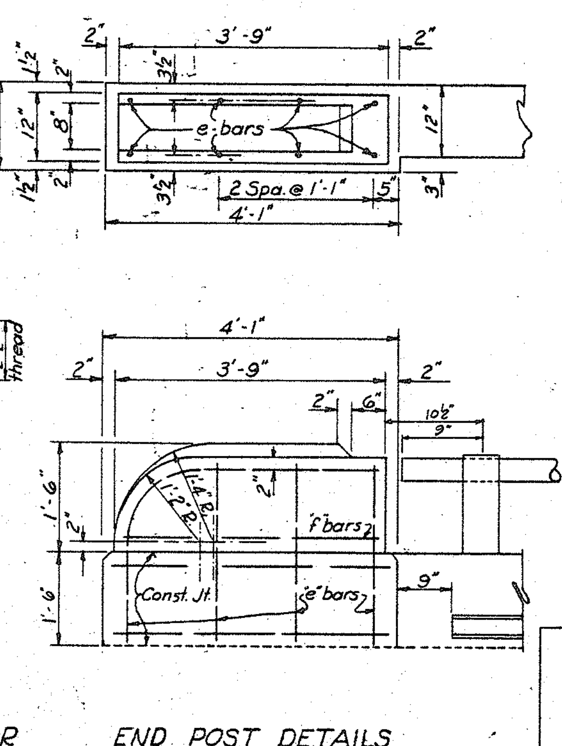
March 1964

REVISIONS						SHEET NO.
NO.	BY	DATE	NO.	BY	DATE	S-8
1			3			TOTAL SHEETS
2			4			26

DRAWN BY Jack Parker DATE 31 March 1964
CHECKED BY R. W. Martin DATE June 1964

SOUTHERLAND BLUE PRINT CO., CHARLOTTE, N. C.





At the Contractor's option metal rail may be either Aluminum or Galvanized Steel in accordance with the requirements of the general notes and the following specifications for the alternate materials; however, the Contractor will be required to use the same rail material on all structures on the project for which metal rail is designated.

GENERAL NOTES

Unless noted on the plans, maximum length of rail section to be two panels plus "stick thru."

End of rail to clear face of concrete End Post by 1 1/2" ±.

For double panel runs of rail, set screws shall be set tight at center post and snug at ends to allow for expansion.
For single panel runs, set screw to be tight at one end and snug at other end.

3/4"φ Anchor bolts - hex. nuts and washers to be steel galvanized in accordance with ASTM A-153 and painted with 2 coats of aluminum paint after erection.

Cast posts to be as shown or an approved equal.

Certified Mill reports are required for rails and posts. Shop inspection is not required.

Metal Rail Posts to be set normal to curb grade.

Method of measurement for Metal Rails:
Unless otherwise stated, the length of Metal rails to be paid for shall be the continuous horizontal length measured from inside to inside of concrete posts, but without deductions for spaces between rail sections.

Concrete and reinforcing steel for End Post are included with Superstructure or End Bents.

ALUMINUM RAILS

Aluminum alloys are to be as follows:

Cast Rail Posts	A356 - T6
Round Tubular Rail	6061 - T6 or 6062 - T6
Set Screws	2024 - T4
Closure Plates	6061 - T6 or 6062 - T6

Round Tubular Rails are to be of 4" O.D. with 3/16" minimum wall thickness.

The base of rail posts, or any other aluminum surface in contact with concrete shall be thoroughly coated with an aluminum impregnated caulking compound of approved quality.

GALVANIZED STEEL RAILS

Material and galvanizing are to conform to the following specifications:

Cast Rail Post	Malleable cast iron, ASTM A47 Grade 35018, Galvanized to ASTM A123.
or	Cast Steel, AASHO M192-60 Class 70, Galvanized to ASTM A-123.
4" O.D. Rail	Standard 3 1/2" Galvanized Steel Pipe, ASTM A-53
Closure Plates & Shims	Steel, ASTM A-245 Grade C, Galvanized to ASTM A-123
Set Screws	Standard Steel Cap Screws, Galvanized to ASTM A-153.

The cut ends of galvanized pipe railing, the end closure plate weld after grinding smooth and areas adjacent to the weld where spelter coating has been burned by welding shall be thoroughly cleaned by wire brushing to remove all traces of welding flux and loose or cracked spelter after which these cleaned areas shall be given two coats of Zinc paint meeting the requirements of Federal Specification MIL-P26915 (USAF) Type I.

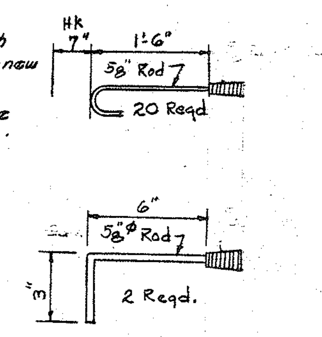
Unclass. Structure Excav. Cu.Yds.	80

*NOTE: Includes 12.2 Cu.Yds. of Class "A" Concrete using #4 Aggregate.

NOTE: The above quantities, Concrete, Brick Masonry & Unclassified Structure Excavation are approximate only. The exact quantities shall be determined by the Engineer in the field.

NOTE: The above Bill of Material includes all quantities necessary for construction, facing with brick, placing handrails, etc. for all walls at South end of Bridge. These quantities are listed on the General Drawing by the title of Walls, Brick Facing & etc. @ South end.



DETAIL OF EXP. ANCHORS

Note: For Expansion Anchor requirements see sheet S-N.
Payment for these two types of Expansion Anchors shall be included in the unit price bid per Cu.Yd. for Class "A" Concrete.

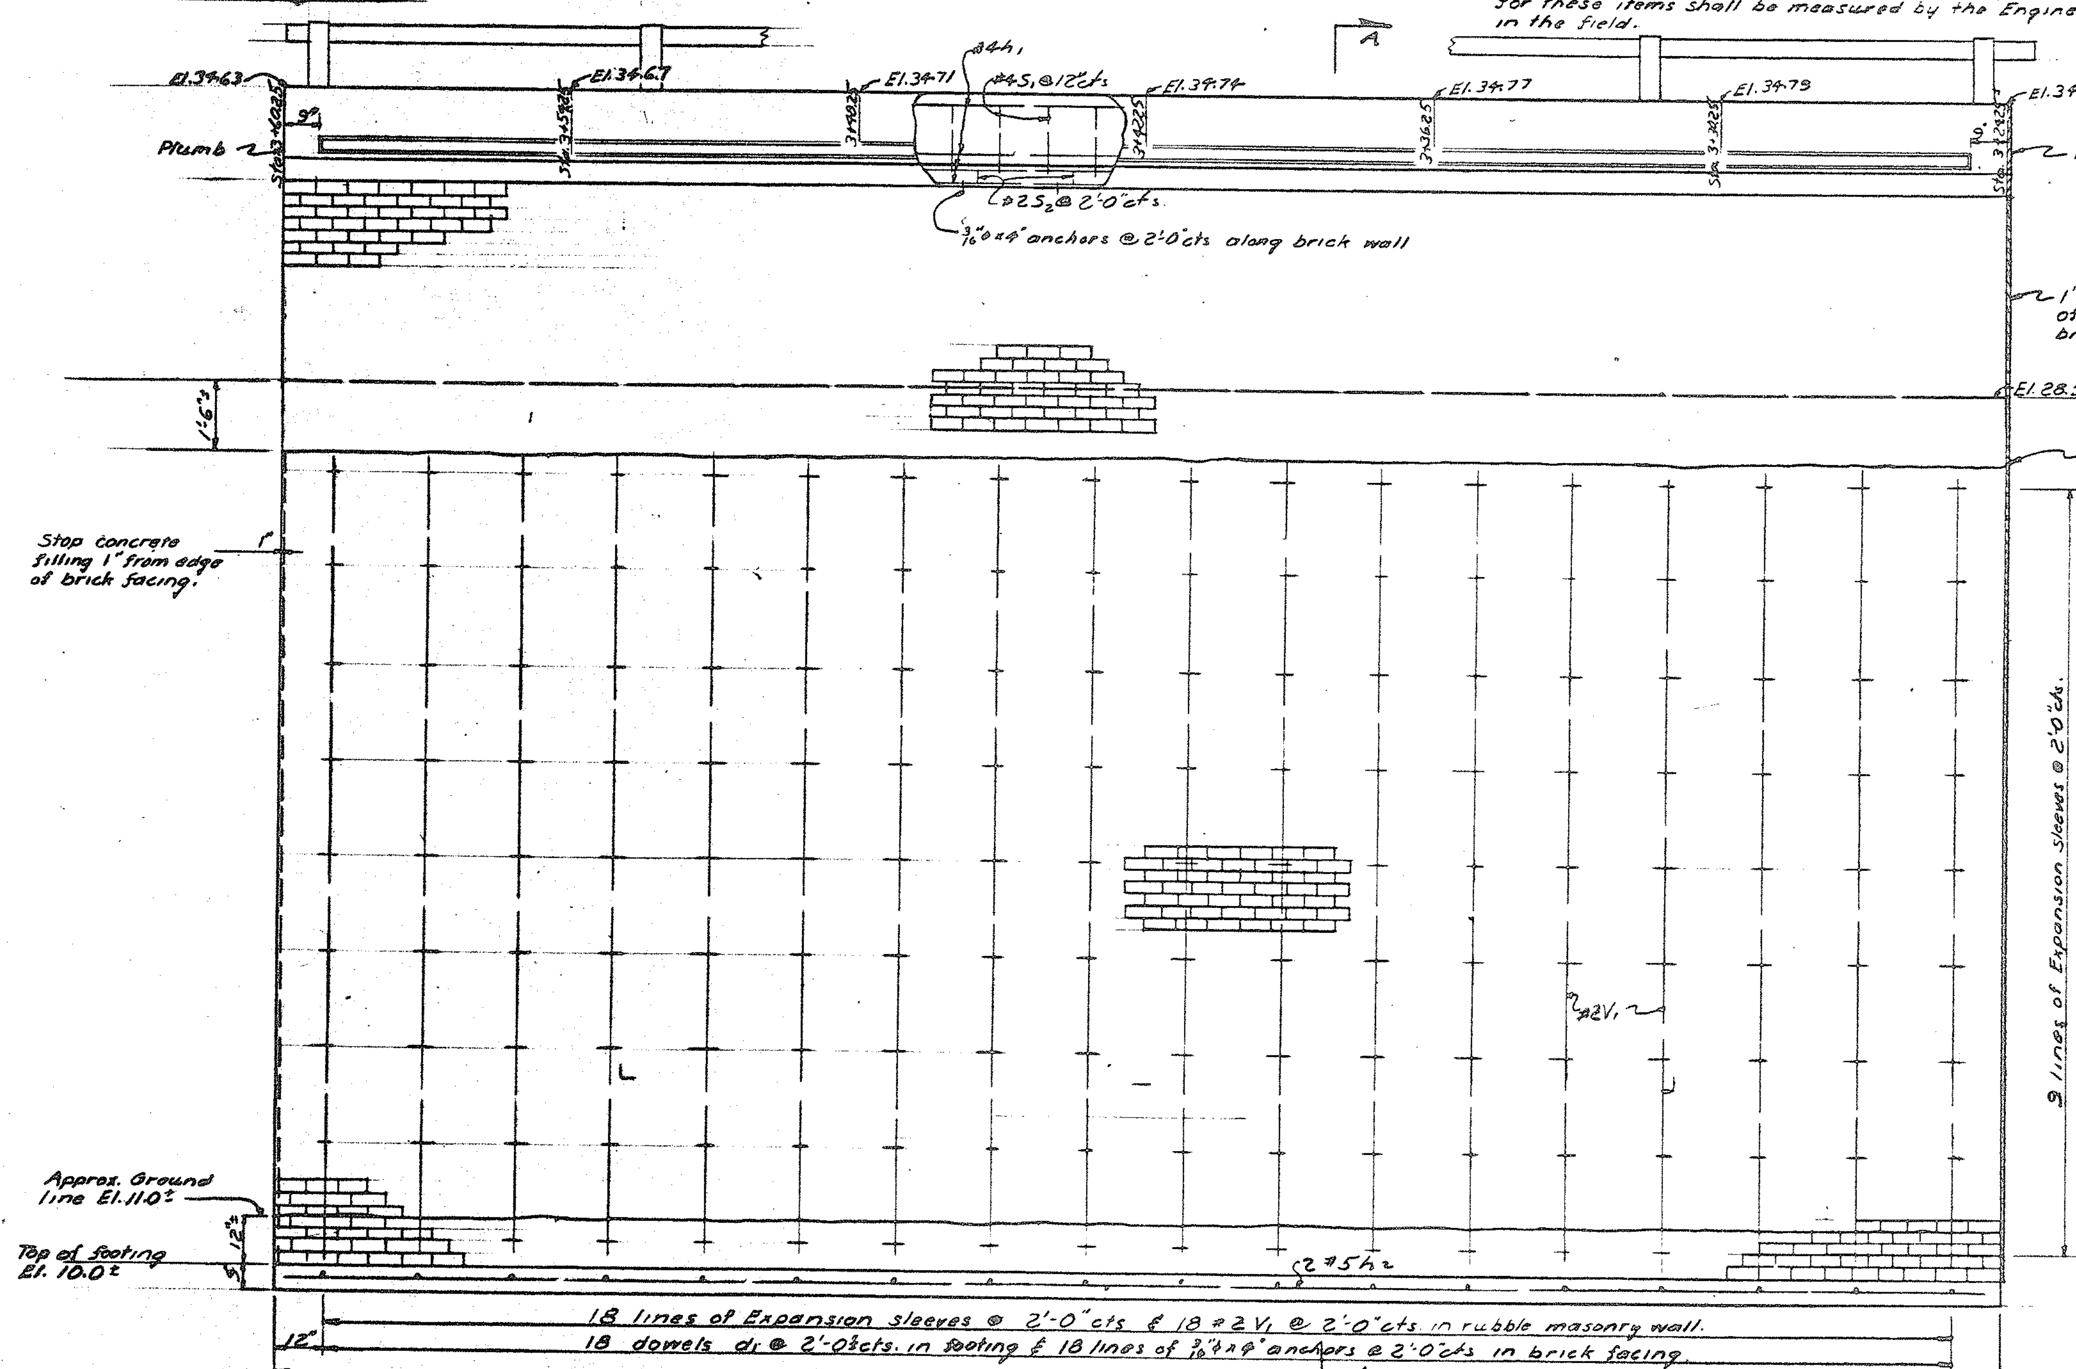
NOTES

All mortar joints shall be ⅜" and concave.

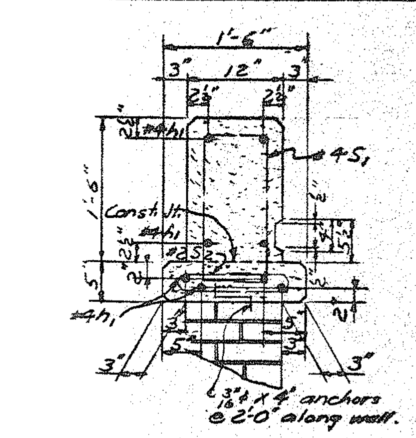
The existing stucco on the rubble masonry wall shall be removed, then the wall hosed down with water to wash away dirt, etc. The payment for this work shall be included in the unit price bid per Cu.Yd. for brick masonry.

Any excavation necessary for placing brick on top of rubble masonry as shown shall be included in "Unclassified Structure Excavation".

Quantities for "Class A Concrete" and for "Brick Masonry" are approximate only. The exact quantities for these items shall be measured by the Engineer in the field.

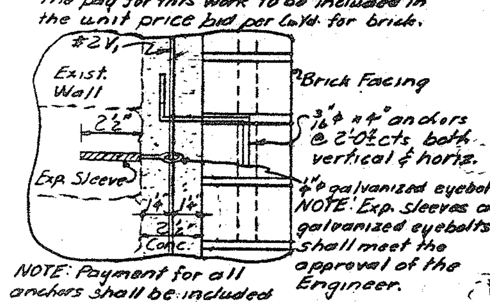


ELEVATION W-W



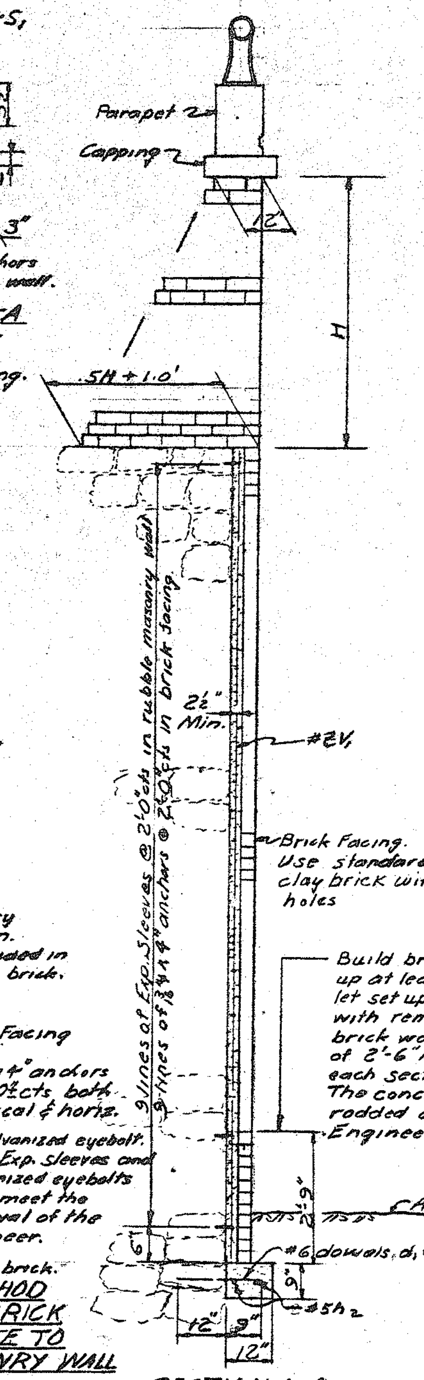
PART SECTION A-A

NOTE: Use #4 aggregate in all concrete behind brick wall and in capping.



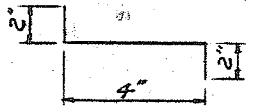
NOTE: Payment for all anchors shall be included in the unit price bid per Cu.Yd. for brick.

DETAIL SHOWING METHOD OF FASTENING NEW BRICK FACING AND CONCRETE TO EXISTING RUBBLE MASONRY WALL



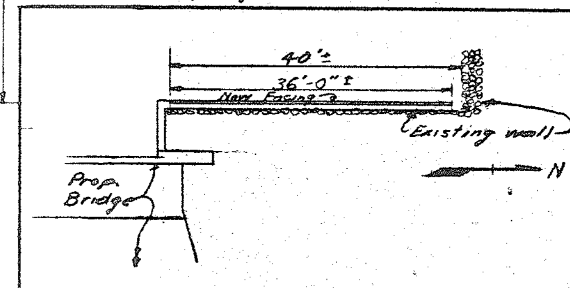
Build brick wall to this elevation and let set up at least 24 hrs. Then pour concrete and let set up for at least 48 hrs. Then proceed with remaining wall as follows: Complete brick wall. Then pour concrete in sections of 2'-6" height allowing 48 hrs. between each section.
The concrete behind this section may be rodded or vibrated as directed by the Engineer.

SECTION A-A



DETAIL OF 3/16" x 4" Anchor

Note: 3/16" anchor to be hot-dipped galvanized steel.



LAYOUT SHOWING LOCATION OF WALL

* Includes 5.6 cu.yds. using No4 aggregate in concrete behind brick wall and in capping.

Bent #2	11	20"	55'-0"	605
Bent #2	* 1	20"	60'-0"	60

* Indicates Test P[illegible]

GENERAL NOTE:

All prestressing strands shall be 7-wire stress relieved cables in accordance with the specifications. The contractor may, at his option, use any one of the strand sizes and types as listed below, but all cables used in a pile shall be of the same size and type.

Size	Type	No. Cables Req'd.	Area	Ultimate Strength	Applied Prestressing
⅜"	Standard	22	0.0779 □"	20,000 # per cable	14,000 # per cable
⅜"	High Str.	19	0.0840 □"	23,000 # per cable	16,100 # per cable
7/16"	Standard	16	0.1089 □"	27,000 # per cable	18,900 # per cable
7/16"	High Str.	14	0.1152 □"	31,000 # per cable	21,700 # per cable

Cables shall be equally spaced around a circle of the diameter shown in the "Typical Section".

General Note:
In driving piles, a method approved by the engineer shall be used, whereby the head of the pile is not damaged.

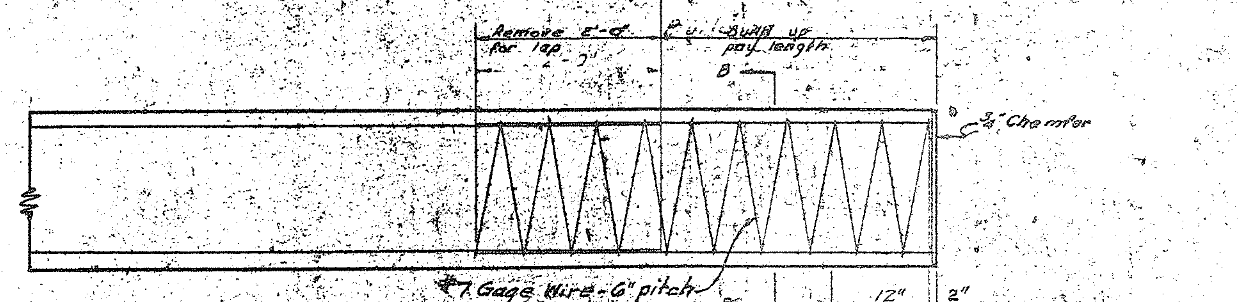
Build-up, where necessary, shall be done in accordance with the specifications, except that the reinforcing steel required in the build-ups shall be included in the contract unit price per foot for the pile and will not be paid for as reinforcing steel.

All material and workmanship as per the specifications of the North Carolina State Highway Commission.

Devices for lifting the piles from the casting beds shall be approved by the Engineer. These devices shall consist of inserts set in the piles to receive threaded eye-bolts, or similar approved devices. The use of loops of cable cast in the piles for use as lifting devices will not be permitted. The use of satisfactory clamps or slings will be permitted where this is practicable without the use of lifting devices cast in the piles. After eye-bolts or other attachments have been removed the openings shall be repaired in a satisfactory manner before delivery to the bridge site in order to obtain a uniform appearance.

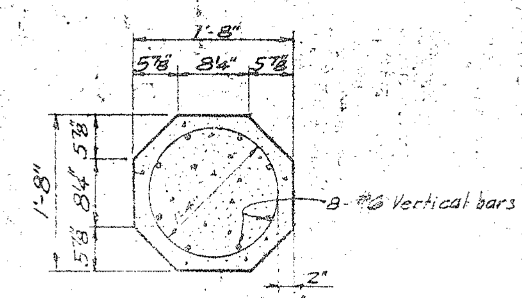
Because of the resulting surface finish, Slip-form method of casting piles will not be permitted.

All prestressing strand shall meet the requirements of ASTM-A416.

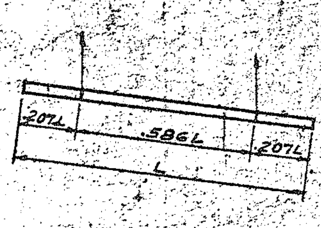


Pile Build up

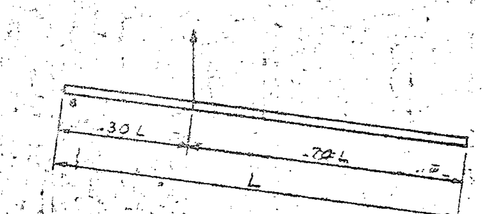
Note: If additional driving is required, 2" pitch shall be used for spiral wire within these limits.



Section B-B

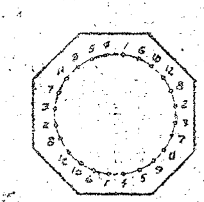


Method of picking up Piles
59 feet to 85 feet
2 pick up points



Method of picking up piles
up to 58 feet
1 pick up point

If cable stress is relieved by burning, the cables shall be burned in opposite pairs as indicated in the typical pattern shown for any number of cables. Burn in opposite pairs and symmetrical about both vertical and horizontal axes. Cables 1-1 shall be burned before 2-2, etc. Not more than 4 cables, say 5-5 and 6-6, may be burned at any one section before these same pairs of cables are burned at both ends of the bed and between each pair of piles in the bed.



Typical Pattern for Burning Cables

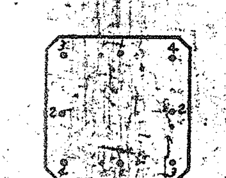
2 pick up points



TYPICAL PATTERN FOR BURNING CABLES

If cable stress is to be relieved by burning, the cables shall be burned in opposite pairs as indicated in the pattern shown above. Cables 1-1 to be burned before 2-2 etc.
Not more than 4 cables, say 1-1 and 2-2, may be burned at any one section before these same pairs of cables are burned at both ends of the bed and between each pairs of piles in the bed.

Design Data:
Concrete: f'c = 5,000 p.s.i.
fc = 2,000 p.s.i.
Impact in handling = 50%

In driving piles, a method approved by the Engineer shall be used, whereby the head of piles is not damaged.

All material and workmanship as per the Specifications of North Carolina State Highway Commission.

The contractor may use either #2 ties or #7 Wire Spiral as shown.

Build up where necessary shall be done in accordance with the specifications, except that reinforcing steel required in the build-ups be included in the contract unit price per for the pile and will not be paid for as reinforcing steel.

All prestressing strand shall be 7-wire stress relieved cables in accordance with the Specifications. The contractor may, at his option, use either of the two types of listed below; however, all cables in a pile shall be same type:

Type	Area	Ultimate Strength	Applied
⅜" High Strength	0.0840 □"	23,000# per cable	16,10[illegible]
7/16" Standard	0.1089 □"	27,000# per cable	18,90[illegible]

All prestressing strand shall meet the requirements of ASTM-A416.
